SUMMARY

Staff Product Designer with 12 years designing AI and complex B2B products. Shapes product direction in ambiguous spaces and carries it through hands-on research, interaction design, and design systems. Experience includes Microsoft 365 Copilot at 150M monthly active user scale, 0 1 SaaS products, and production AI workflows, with measurable outcomes including a 58% increase in trial sign-ups, 26% revenue growth, and a 34% increase in upsell.

KEY ACHIEVEMENTS

Reframed Microsoft 365 Copilot's agent-creation initiative

Used competitive benchmarking to help shift the work from a full redesign to targeted improvements within a product operating at a scale of **150M monthly active users**. See case ↗

Led the creation of Alana AI's first customer-facing platform

Transformed a high-touch AI service into a self-service B2B SaaS product, followed by a **26% increase in revenue** and a **34% increase in upsells** the following year. See case ↗

Defined a new AI product at TidalHaus through production

Shipped 3 AI capabilities; separately, the iOS redesign was followed by a **58% increase in trial sign-ups**. See case ↗

Created product and design foundations that increased team leverage

Established a design system that, based on internal sprint estimates, **reduced design time by roughly 40%** and **development time by roughly 20%**. See case ↗

EXPERIENCE

Lead Product Designer

São Paulo, Brazil · Remote

TidalHaus

10/2025 - 08/2026

- Owned UX and product design direction across iOS, iPad, and web as TidalHaus's sole product designer, spanning AR, sheet management, and core construction workflows.
- Proposed an AI product direction based on customer project files and competitive research, expanding TidalHaus beyond document management into workflows for preparing construction work. Secured leadership support for the direction.
- Owned end-to-end design for three AI capabilities that reached production: task and inspection extraction from Project Manuals, sheet filing, and inspector walkthroughs.
- Established review and confirmation patterns across AI-generated work and assignment recommendations, allowing users to review, correct, and approve suggestions before creating or assigning tasks and inspections.
- Established shared information architecture, navigation, and a design system connecting AR and sheet-management workflows across devices, while accommodating distinct light and dark interfaces without requiring a full legacy redesign.
- Led the iOS redesign. Product data showed a 58% increase in trial sign-ups after launch compared with the previous experience.

Staff Product Designer

São Paulo, Brazil · Remote

Microsoft

05/2023 - 09/2025

- Owned the design of structured configuration experience for custom agents in Microsoft 365 Copilot. Coordinated with other designers to connect this area to the broader agent-creation journey.
- Led competitive benchmarking that helped shape the team's move toward conversation-first agent creation with less upfront configuration. Built a comparison framework covering creation time, clicks, information demands, and required fields.
- Redesigned source and file configuration for custom agent creation, reducing unnecessary decisions and simplifying setup while preserving the information needed to create a useful agent.
- Co-designed the permissions and access-limit UI within source selection, making access constraints visible before setup was complete. Addressed the risk of an agent working for its creator but lacking access to the same information for its intended audience.
- Contributed to a redesigned agent-creation journey that required fewer steps and clicks, verified through a repeat benchmark using the same framework.

Head of Product Design & Partner

Alana AI

- Led the creation of Alana's first customer-facing platform in 20 weeks, turning a high-touch AI service into a self-service B2B SaaS product. Owned experience strategy and product architecture across the platform while remaining hands-on in product design.
- Proposed packaging the product around levels of automation and control, creating a unified model for how customers could choose between greater AI automation and greater human control. Gained founder support for the model and worked with founders and product partners on its commercial implications.
- Designed centralized AI quality review and native human handoff based on customer research, allowing customers to inspect and grade AI replies and continue conversations the AI could not resolve.
- Reframed the Insights experience around customer objectives and KPIs, reconciling the founders' desire for product differentiation with Sales' need for an experience customers could understand quickly.
- Hired and led three designers after starting as the sole product designer, while continuing to design hands-on and guiding the team's work through production.
- Led prototype usability testing using the same six tasks. In the final round, all participants completed all six tasks; task times fell from 2m 32s to 12s for finding an engagement-rate insight and from 1m 38s to 6s for joining a live Messenger conversation.

Previous Experience 2012 - 2018

- Additional product design experience available upon request.

EDUCATION

MBA in Project Management 2023 - 2025
University of São Paulo (USP)

Master's in Interaction Design 2019 - 2021
Tallinn University

Specialization in UX Design 2017 - 2018
EBAC

Bachelor's in Design 2009 - 2013
Anhembi Morumbi University

PROJECTS

UI Forge

A personal project that transforms Figma design systems into production-ready code for React, TypeScript, Tailwind, and Storybook, assisting AI-supported teams in maintaining system integrity and scaling implementation quality. See case ↗
